

# GUI-BASED CHAT-2

## COMPUTER NETWORKING

**Time:** 60 mins

### Introduction

In this class, the student/s will create a GUI feature for the chat screen window and send messages to multiple clients.

### New Commands Introduced

- `self.window.withdraw()` Hide the window
- `self.login = Toplevel()` Places the screen to the top
- `self.window.deiconify()` Turns back the icon into chat window
- `self.login.destroy()` Terminates the mainloop process and destroys all the widgets inside the window.
  
- `self.text_comm.config(state = DISABLED)` Makes the button unresponsive by disabling the state
- `self.text_comm.config(cursor = "arrow")` Shows the cursor with current position of the user using an arrow
  
- `self.entry_msg.delete(0, END)` Clears all the content of the Entry box
- `self.text_comm.config(state = NORMAL)` Makes the button clickable
- `self.text_comm.insert(END, message+"\n\n")` Inserts the string and END specifies the index
- `self.text_comm.see(END)` Checks if a string is visible or not at a given index
- `self.show_message(self.msg)` Stores the message from the text input box to self.msg
- `scrollbar = Scrollbar(self.text_comm)` Add the Scrollbar widget

### Vocabulary

- **Group chat** is a type of communication platform that allows members of a group, team or organization to quickly and easily exchange information in real-time through instant messaging.
- **States in Tkinter**

The Tkinter button has two states: normal and disabled. In the regular condition, we can push the button; but, in the disabled state, we cannot click the button.

- **A scroll bar** is a graphical user interface element used in computer applications and websites to enable scrolling through content that extends beyond the visible portion of a window or a container.

## Learning Objectives

Student/s should be able to:

- **Recall** the use of widgets like label, entry\_box and button to build the screen window.
- **Explain** the use of Tkinter to switch between login and chat window for the clients.
- **Demonstrate** the storing, sending and displaying the group chat messages.

## Activities

### 1. Class Narrative: (3 mins)

- Brief the student/s that they have created the chat login feature and now they will help the characters to extend the GUI to chat screen windows.

### 2. Concept Introduction Activity: (4 mins)

- Let the student/s undertake the explore-activity to observe the username and chat message format.
- Ask the students to compare and name the Tkinter widgets required to build the chat screen window.
- Using the slides, explain that the student/s will learn:
  - to build a chat window
  - to send the message
  - to display the message

### 3. Activity 1: Build a Chat Window (14 mins)

#### Teacher Activity: (7 mins)

- Explain why the two screens cannot be created as instances of the same class.
- Explain creation of a window for the chat screen and hide it to place the login screen with widgets to the top.
- Explain how we can switch from the login window to the chat window and add widgets by defining a function.

#### Student Activity: (7 mins)

- Guide the student/s to add the chat screen window and place the login screen window on the top.

- Guide the student/s to remove the login window and its widgets, and later open the login window with its attributes and layouting.

#### 4. Activity 2: Send the Message (12 mins)

**Teacher Activity:** (6 mins) .

- Explain that the Send button is not functional and introduce the concept of states to enable and disable the Send button while sending messages from the entry\_box widget.
- Explain how to send the message from the client and store it.

**Student Activity:** (6 mins)

- Guide the student/s to send the message and store it.

#### 5. Activity 3: Display the Message (12 mins)

**Teacher Activity:** (6 mins)

- Explain to the students that we can send messages to the chat window by setting the state to **NORMAL**.
- Explain how to display the list of latest messages and add a scrollbar to read older messages.
- Demonstrate how to display the messages on the client's chat window and add the scrollbar functionality to it.

**Student Activity:** (6 mins)

- Guide the students to define a function to display messages and add a scrollbar.

#### 6. Introduce the Post class project: (2 min)

- Create a GUI for the Quiz app and accept an answer from the input box.

#### 7. Test and Summarize the class learnings: (5 mins)

- Check for understanding through quizzes and summarize learning after respective activities.
- Summarize the overall class learning towards the end of the class.

#### 8. Additional activities:

- Encourage the student/s to add the functionality to clear the chat when the Clear button is clicked.
- Encourage the student/s to display new messages in a pop up window.

## 9. State the Next Class Objective: (1 min)

- In the next class, student/s will learn to create network based multiplayer games.

## U.S. Standards:

CSTA: 2-AP-11, 2-AP-12, 2-AP-13, 2-AP-14, 2-AP-19
